PROFESSIONAL SUMMARY

Full Stack .NET Engineer with 4+ years designing and delivering scalable enterprise web applications using C#, .NET Core, ASP.NET MVC, REST APIs, SQL Server, Angular, and Azure across financial services and healthcare environments. Proven expertise in backend services, database optimization, front-end development, and CI/CD automation with hands-on experience in code reviews, Agile delivery, and AI-assisted development using GitHub Copilot, Azure OpenAI, and Claude.

EDUCATION

University of South Florida
M.S., Artificial Intelligence & Business Analytics

Aug 2024 - May 2026

SKILLS

Programming Languages: C#, JavaScript (ES6+), TypeScript, Python, R, Java, Shell Scripting, HTML5, CSS3, PL/SQL, T-SQL, XML.

Frameworks & Libraries: React JS (TypeScript, Hooks, Context API, Redux), AngularJS (NgRx, RxJs), NodeJS, Next.js, SPA, AJAX, jQuery, Bootstrap, Material UI, .NET Core (5-10), ASP.NET MVC, Entity Framework Core, Razor, Dapper, AutoMapper, LINQ, Async/Await, REST API, Microservices.

Cloud & Databases: Microsoft Azure (App Service, Service Bus, Functions, Blob Storage, Event Grid), AWS (Lambda, S3, RDS), Vector Databases, MS SQL Server, MSSQL, Database Design, PostgreSQL, Oracle SQL Developer, Snowflake, MySQL, MongoDB, Cosmos DB, Redis.

DevOps & Tools: Visual Studio, Git, GitHub, GitLab, GitHub Copilot, Jira, Azure DevOps, SSMS, SSRS, SSIS, Docker, Kubernetes, Linux, WSL, SonarQube, Postman, Jenkins, Kafka, Automation Tools.

Practices: OOP, Design Patterns, SOLID Principles, OAuth2/JWT, CI/CD, TDD, OIDC, RBAC, OWASP, Agile/Scrum, Testing (NUnit, MSTest, xUnit).

AI & GenAI: Generative AI, LLMs, Agentic Workflows, RAG Patterns, Azure AI Foundry, CrewAI Studio, Vector Databases, Azure Open AI, Prompt Engineering, AI Orchestration Frameworks, AI Tools.

WORK EXPERIENCE

University of South Florida | Graduate Teaching Assistant - AI Analytics & Organizations

Jan 2026 - May 2026

- Designed and integrated AI-powered solutions using Azure OpenAI and Azure AI Foundry implementing RAG patterns with vector store integration, document grounding, embedding pipelines, and intelligent search to deliver knowledge-grounded AI agents for 80+ graduate students.
- Built and maintained AI agent workflows using CrewAI Studio designing autonomous multi-agent orchestration systems with prompt engineering pipelines, tool integrations, and real-time output validation demonstrating production-ready agentic AI development practices.
- Implemented responsible AI practices including safety guardrail configuration, custom content filters, blocklist management, and prompt shield controls ensuring secure, compliant AI deployments aligned with data access and privacy standards.
- Served as a technical resource for 80+ graduate students, providing structured architectural guidance on multi-agent AI pipeline design, conducting hands-on debugging walkthroughs, and achieving a 95%+ assignment pass rate through iterative feedback and office hour support.

Raymond James Financial | Full Stack Software Engineer - .NET & Angular

Oct 2024 - Apr 2025

- Developed .NET Core applications and REST APIs supporting financial data operations integrating 10+ third-party system connections with sub-200ms response times and zero production incidents in a regulated enterprise environment.
- Architected scalable Angular front-end applications with reusable component libraries, state management patterns, and performance-optimized rendering delivering user-centric interfaces for financial workflows in a regulated Azure-hosted environment using TypeScript, HTML, and CSS.
- Designed relational database schemas and authored complex Oracle SQL stored procedures supporting large-scale financial data ingestion, transformation, and reconciliation workflows with zero data integrity incidents across all releases.
- Collected and translated business requirements from stakeholders into Angular and .NET Core technical implementations delivering features end-to-end across all SDLC stages in a regulated enterprise environment.
- Implemented OAuth2/JWT authentication and role-based access controls across Angular and .NET Core applications enforcing secure API access, session management, and audit-ready authorization patterns in a regulated financial enterprise environment.
- Participated in code reviews upholding high standards of code quality incorporating senior engineer feedback and promoting knowledge sharing across sprint deliverables in an Agile environment.
- Diagnosed and resolved multi-layer application and data issues in production performing root cause analysis across .NET Core backend, REST API, and Angular front-end layers to minimize downtime and prevent recurrence.

Innova Solutions Pvt, Ltd | Associate Software Engineer - .NET & React

Jul 2022 - Jul 2024

- Engineered ASP.NET Core 6 microservices in C# to handle healthcare insurance billing cycles, premium invoicing, and payment reconciliation for 1M+ subscribers cutting billing runtime by 35% through scalable event-driven architecture.
- Developed React.js customer self-service portals with reusable component libraries, state management patterns, and performance-optimized rendering reducing customer support calls by 30% through seamless .NET Core backend REST API integration using HTML, CSS, and TypeScript-based front-end patterns.
- Developed React.js provider dashboards displaying patient benefits, prior authorization requests, and claim statuses reducing manual provider inquiries by 40% through real-time data integration with backend eligibility APIs.
- Designed and implemented REST APIs with clear contracts, versioning, and backward compatibility enabling reliable integration between front-end applications and .NET Core backend services across distributed systems.
- Implemented event-driven messaging using Azure Service Bus and Kafka pub/sub pipelines handling high-volume billing events and payment confirmations with reliable message delivery across distributed microservices.

- Optimized SQL Server and T-SQL queries using indexed views, partitioning, CTEs, and stored procedures performing query optimization and performance tuning reducing query latency by 70% across high-volume monthly healthcare billing records.
- Created unit, integration, and regression tests with NUnit, Moq, and MSTest leveraging GitHub Copilot as an AI tool to auto-generate test scaffolding and edge-case scenarios raising coverage to 85% and cutting production defects by 50%.
- Containerized .NET Core microservices using Docker and orchestrated deployments on Azure Kubernetes Service (AKS) maintaining 99.9% system uptime with scalable, fault-tolerant cloud-native architecture.
- Built and maintained robust CI/CD pipelines using Azure DevOps and Jenkins implementing automated builds, environment promotion strategies, release governance, and rollback procedures reducing deployment time by 70%.
- Migrated provider claim data to MongoDB for faster schema evolution enabling flexible storage of unstructured prior-authorization requests and improving data access patterns across distributed healthcare workflows.
- Designed HIPAA-compliant claim adjudication APIs ensuring PHI access controls, audit logging, and data security compliance reducing audit issues by 30% across provider, payer, and internal staff access workflows.
- Participated in 2-week Agile sprints with business analysts and QA delivering features like real-time eligibility checks and automated claim denial workflows across 10+ consecutive releases.

Innova Solutions Pvt, Ltd | Software Engineer Intern - .Net & React

Mar 2022 - May 2022

- Gained hands-on exposure to healthcare billing microservice architecture by assisting senior engineers in developing ASP.NET Core 6 components for invoice generation and payment reconciliation workflows, accelerating delivery of 3+ billing features during sprint cycles.
- Contributed to React.js customer self-service portal development by building 10+ reusable UI components under senior developer guidance, helping the team clear sprint backlog items faster across feature delivery cycles using HTML and CSS styling.
- Increased test coverage by 25% by writing unit tests with NUnit and MSTest supporting senior engineers' efforts to validate billing logic and reduce regression risk across healthcare billing workflows.
- Reduced team onboarding ramp-up time by 30% by documenting 20+ backend API endpoints and database schema details supporting knowledge-sharing and continuity across the engineering team during the internship period.

Suvidha Solutions Pvt, Ltd | Junior Software Engineer - .Net

Jan 2021 - Feb 2022

- Architected TalentX from scratch designing system architecture, data models, and workflow logic for an end-to-end enterprise hiring platform covering job postings, candidate tracking, and selection workflows.
- Integrated TalentX with third-party recruitment platforms using REST APIs consuming external job board APIs and candidate data feeds to automate data ingestion and streamline hiring workflow operations.
- Developed REST APIs backed by T-SQL stored procedures with schema optimization enabling efficient data retrieval and cross-functional team integration across hiring workflow modules.
- Assisted in setting up and maintaining Linux-based development environments using basic shell scripting and command-line operations to configure application services and support deployment tasks across the TalentX platform.

PROJECTS

Crime Hotspot Prediction

- Built a binary classification pipeline on 836K+ U.S. crime records (2020–2024) engineering cyclic temporal features (hour, day, month) and K-Means geospatial clusters to improve spatial signal across high-crime region identification.
- Benchmarked Logistic Regression, KNN, Random Forest, and XGBoost using stratified 80/20 split and RandomizedSearchCV hyperparameter tuning selected Random Forest achieving F1 score of 84% as the optimal model.
- Applied SMOTE-based class balancing and label encoding for high-cardinality categorical features across a 21-feature dataset reducing class imbalance bias and improving minority class prediction accuracy.

FairShare - Group Expense Management App

- Architected a full-stack group expense management application using ASP.NET Core MVC and Entity Framework Core with SQLite, implementing CRUD operations for expense tracking, automated cost-splitting logic, and multi-user settlement workflows.
- Integrated live currency conversion via ExchangeRate API enabling real-time multi-currency expense calculations and built Chart.js dashboards providing visual spending breakdowns and group balance summaries.
- Deployed the application on Azure App Service with CI/CD pipeline configuration ensuring scalable cloud hosting, environment-based configuration management, and zero-downtime releases.

Cricmetrics - IPL Analytics Dashboard

- Built a 10-page IPL analytics dashboard using React, TypeScript, and Vite with CSV-based data pipeline via PapaParse processing structured cricket datasets into interactive Recharts visualizations across batting, bowling, and team performance pages.
- Integrated Anthropic Claude API to power CricBot, an AI chatbot delivering natural language IPL insights, implementing a Vite proxy workaround to resolve CORS restrictions and enable seamless client-side API communication.
- Designed a modular component architecture with React Router for multi-page navigation, responsive layouts, and reusable chart components enabling consistent data presentation across 10 analytics views.
